

make AI AGENTS IN 7 STEPS

1. Agent or Automation

Does it need complex decision making?

For workflows requiring autonomous decision trees or conditional logic based on varied inputs.

Does it need to coordinate multiple steps intelligently?

When your automation must understand context across steps and adapt accordingly.

Does it need to select and use different tools?

For workflows where AI must choose appropriate tools based on the situation.

Does it need to maintain conversation context?

When handling multi-exchange interactions that require memory of previous exchanges.

Does it need to work across different platforms?

For coordinating actions across various systems based on intelligent evaluation.

2. Create the AI Agent

- ☐ Head over [here](#)
- ☐ Choose model (Claude 3.7 or GPT 4.1 recommended)
- ☐ Give System Prompt: use Claude and define inputs, outputs

3. Choose the Trigger

- ☐  Telegram
- ☐  Webhook
- ☐  Email
- ☐  SMS/Text Message
- ☐  Google Calendar Event
- ☐  Slack Message
- ☐  Form Submission
- ☐  File Upload
- ☐  Database Record Change
- ☐  Scheduled Time/Cron Job
- ☐  Twitter/X Mention
- ☐  Microsoft Teams Message
- ☐  CRM Entry (Salesforce, HubSpot, etc.)
- ☐  RSS Feed Update
- ☐  API Status Change
- ☐  \$ Payment Received
- ☐  Weather Alert
- ☐  Custom HTTP Request

4. Create a Scenario with an Agent

- ☐ Create a scenario
- ☐ Add in the trigger + Agent
- ☐ Connect the inputs

5. Create tools

- ☐ Develop scenarios for your use case (each scenario is a tool)
- ☐ Name that scenario something relevant
- ☐ Assign inputs and outputs to each scenario
- ☐ Set them to run 'on Demand'

6. Add your Tools to your agent

- ☐ Connect your agent with your desired tools
- ☐ Ensure all scenarios are active

7. Amend settings

- ☐ Reduce operation maximums

Data-based AI Agent Use Cases for Businesses

Customer Experience

-  **Dynamic Customer Service Triage** - Agents that evaluate customer issues in real-time, route to the right department, and prepare relevant context before human intervention
-  **Predictive Support Outreach** - Proactively contact customers when usage patterns suggest they'll encounter problems

Operations & Workflow

- 📊 **Autonomous Report Analyst** - Agent that not only generates reports but explains anomalies, suggests action items, and follows up on implementation
- 📁 **Adaptive Documentation Manager** - Continuously updates internal documentation based on team communications and system changes

Sales & Marketing

- 👤 **Personalized Customer Journey Orchestrator** - Creates individualized marketing sequences by analyzing customer behavior across touchpoints
- 🗑️ **Sales Call Coach** - Listens to sales calls in real-time, suggesting talking points and objection handling based on prospect responses

Finance & Compliance

- 🔍 **Regulatory Compliance Guardian** - Monitors changing regulations, identifies affected business processes, and suggests implementation approaches
- 💰 **Intelligent Cash Flow Optimizer** - Analyzes spending patterns, predicts upcoming expenses, and recommends timing for vendor payments

Product Development

- 🔄 **Customer Feedback Synthesizer** - Aggregates feedback from multiple channels, identifies patterns invisible to humans, and proposes product improvements
- 🧪 **Autonomous A/B Test Manager** - Designs experiments, monitors results, automatically terminates underperforming variants, and documents insights

Human Resources

- 🧑 **New Hire Integration Guide** - Personalizes onboarding, connects employees with relevant team members, and helps navigate company culture
- 📈 **Skills Gap Analyzer** - Identifies emerging skill requirements, matches with employee development needs, and creates personalized learning paths
