Master Prompt for AI Dashboard

Create a comprehensive AI dashboard with a sleek and professional design. The aesthetic should be cool and crisp, using a dark gray background (#1f2937) with vibrant accent tones. All corners should be rounded (use rounded-2xl for cards and rounded-xl for other elements) for a soft, modern look. The entire application must be responsive. Do not include any login or authentication code, as that will be added later.

The name of the application should be Growth Systems.

1. Sidebar Navigation

Structure: A left sidebar with four tabs: Home, Foundations, Profile, and 🗑️ LinkedIn

Profile Area:

Show the user's profile photo centered above their name.

The default display name should be "User".

Clicking on the profile photo or name should navigate to the Profile tab.

Include a "Sign Out" button at the bottom that is styled consistently with the other navigation buttons.

2. Tab: Home

Heading: "Welcome to [App Name]"

Subtext: "Everything you need to grow your business."

Content: An embedded YouTube video with the URL: <https://youtu.be/IKLc9INgRqE>.

1. Tab: Foundations

Design: A scrollable tabbed interface with a progress bar at the top that tracks completion. Include a "Save Progress" button at the bottom for user convenience.

Tabs and Fields:

Proof: "What are the 3 most valuable outcomes you've achieved for yourself or people you've worked with?" (textarea)

Placeholder: e.g., "Helped 173+ clients increase revenue by 83%"

Niche:

"Who's your avatar?" (text input)

"What are their biggest pain points (list them)?" (textarea)

"What does your niche want (desires)?"

"What transformation do you deliver for your niche

how do you deliver that transformation?

Write your journey/transformation/backstories

Data Handling: All data from these fields must be sent with every webhook message.

1. Tab: Profile

Functionality: A dedicated page for users to upload a profile photo and set their display name. This information should be stored and sent with all webhook messages.

1. Tab: LinkedIn

Layout:

A single, wide chat window with a fixed height of 320px, positioned at the top of the page.

The "post type" cards should be in a scrollable section underneath.

Chat Interface:

Header: "LinkedIn Agent"

Background: Use the beautiful, animated gradient background.

Chat Bubbles: Use markdown formatting. User messages are a dark green gradient, while bot messages are dark gray with a border. Include a "copy" button on all bot messages and display timestamps.

Input Bar: Taller to accommodate paragraphs, with a perfectly aligned "send" button.

Loading: Display a three-bouncing-dots animation while waiting for a response.

Actions: Include an "Export Chat" button in the header.

Quick Actions Panels:

Heading: "Choose a post type"

Cards: A 3-column responsive grid of cards with subtle colors and rounded corners. The cards should be for the following 3 post types:

Personal Story

Lead Magnet

Social

URL: [INSERT URL]

Payload: Send all of the following with every message:

All data from the Foundations form.

User profile data (name, photo status).

A unique message ID.

The user's Supabase ID (will be added later)

A sessionUUID for tracking.

The full conversation history (messageHistory).

1. Technical Details

Use React, Tailwind CSS, and a responsive design.

Ensure smooth tab switching and interactions.

Use `localStorage` for temporary data persistence.

All assets should be properly integrated from the public folder.
